Elegance and speed

FULLCARBON construction, INNOVATIVE and ESSENTIAL design, HIGH TECH interior.

The ICE YACHTS shipyard and the Felci Yacht Design team, come together once again, to produce one of the most exciting and innovative projects in their collaboration.

The ICE 53 ST was born with the desire to introduce a high-performance yacht and immediately became the new true racer of the ICE Yachts line intended for an important owner from beyond the Alps who already owns a 52RS EVO to whom he wants to request a further contribution of emotions and performance.

By ST ICE YACHTS it means SPORT TOURISM that is, an object to make a great impression in the main sailing events and then go cruising with a good degree of comfort thanks to the double configuration.

The mission is to significantly improve the already high performance of the ICE 52RS and make the new ICE 53St one of the most beautiful and fastest boats in the 50-foot performance-cruising category.

Compared to the "standard RS" version, the ST has a weight reduction of more than two tons, with an approximate dry weight of 10 tons and a sail plan implemented both upwind and downwind.
