Description

The Advanced 66 "BOTTA DRITTA" is a very special model with his unique owner the owner who equipped the boat with many sails, which can also be used for regattas.

The mast and boom are made of carbon (V boom), the rigging is made of carbon, the interiors are in perfect state and very comfortable.

The instrumentation is updated B&G. The hull was repainted in 2023/2024.

The Advanced 66 has been developed by 2 world-class design studios: Nauta Design and Reichel Pugh. Modernity, ease of handling and great looks are the key words for the design of the A66. She is a mini superyacht and a smaller version of the Advanced 80 as opposed to a larger version of her sporty stablemate the Advanced 62.

Hull lines are modern, but no means extreme. There is a trend for wider and wider sterns in the cruising world, to echo the latest thoughts on ocean racing, a trend that works well in light displacement carbon fire rockets with no interior, but adds far too much drag and unbalanced performance at different heel angles in the cruising world. A moderate balance from Reichel Pugh gives a pleasant hull form, for upwind and downwind work, a balanced feel at all heel angles and a very pleasant sailing experience.

Stability and performance, together with wide volume were key requirements in the hull design. The shape of the rudder and the profile of the fin were developed as a result of R&D to achieve high speed and performance and to allow

to allow the boat to be used for both racing and cruising. The design is a perfect balance between the two.
