Description

REFIT

Over the years, a lot of work has been carried out both on new and improved existing ones. In the 2012/2013 REFIT, the crew cabin was transformed with a third berth, the second generator was renovated, and the galley was modified, closing it and upgrading its facilities. In 2019, Caterpillar carried out a complete overhaul of the two engines with the replacement of almost all their components, including the cylinder heads (documentation available). In the same year, the electrical/home automation/on-board management system was redone with the replacement of equipment and cables and the entire toilet system was also completely replaced. Subsequently, the teak of the deck was replaced with solid teak. In 2024 the partial replacement of the air conditioning system and the replacement of a generator. Every year, improvements have been carried out from the stowage systems in the bilges to the strengthening of the bow and stern mooring systems, to the replacement of the upholstery.

MAINTENANCE

Always stored indoors during the 6 winter months, the criterion of keeping it constantly at the maximum technical efficiency and aesthetics has been scrupulously followed by the professional crew and the best technicians in the area. During these periods, the main engines were serviced annually by CATERPILLAR mechanics and all original parts were replaced when necessary.

The same goes for generators and all other equipment of the various on-board systems from electrical and electronic equipment, to air conditioning, to toilets.
