custom line 140

Description

Custom Line 140' Project: live a life-size dream! Elegance and absolute comfort remain the priority on board this Custom Line 140'. With an overall length of 42.15 metres and a beam of 8.57 metres, this yacht has been designed especially for the yachting enthusiast. It is the result of a partnership between the Ferretti Group's "Product Strategy Committee", headed by Mr. Piero Ferrari, and the Group's Engineering Department. The exterior and interior styling is by Francesco Paszkowski Design, with the collaboration of Margherita Casprini and the Custom Line Workshop.

FAST DISPLACEMENT AND MAXIMUM STRENGTH With its fast moving hull, the Custom Line 140' can reach a top speed of 21.5 knots. With a gross tonnage of just under 400 tonnes, she is the largest yacht ever built by the brand. Thanks to innovative lightweighting technology and hybrid materials, this model is able to maintain high performance, while ensuring impeccable strength and safety on board and throughout the voyage.

AN INNOVATIVE DESIGN WITH AN ELANCE PROFILE The design of the Custom Line 140' is inspired by residential architecture. It stands out in particular for its slender lines from stern to bow, but also for its play of colours, characterised by the light-coloured materials of which it is made and its tinted windows. Its general aesthetics are also deeply inspired by sportiness, while maintaining the "family friendly" concept that characterises the Planante line of the brand. All these details give it a very distinguished look.
