Description

Characteristics of the Windelo 54

A true big brother of the Windelo 50, the Windelo 54 is an offshore catamaran designed by the architect duo Christophe Barreau and Frédéric Neuman. The hulls are almost 120 cm longer, including 60 cm in the nacelle, for an even more comfortable life on board.

Eco-responsible and seaworthy, our Windelo 54 catamarans are designed for long distance sailing. The lengthening of the hulls brings more performance and speed under sail while improving sailing comfort, especially in very rough seas. The extra volume in the living areas, the accommodation, the storage space and the great capacity to recharge its batteries under sail, give the Windelo 54 a great autonomy. Dare to dream and take full advantage of your desires for adventure, great sailing and the open sea.

Characteristics of the Sport version

Are you looking for performance, efficiency and speed of action with comfortable living spaces? Are you a fan of technical innovation and a fan of "more for less" while respecting your environment?

Our Sport version is made for you. On board, combine resource management and surpassing yourself, breathe in the wind speed and feel the sea spray on your skin.

The Sport is the best performing boat. The materials used are noble and technical in order to save weight (carbon, technical fabrics etc...). Its layout,
