shogun Hausboot diy 12m

89 500 € ALL TAX INCLUDED

Description

Houseboat DIY (Do it yourself) for self-conversion

It is a welded structure made of hot-dip galvanized steel profiles, which includes a bow terrace with a balustrade, a technical terrace with balustrade, which includes a technical cabinet and brackets for fixing the balustrade on the upper terrace. 8 buoyancy bodies that are firmly connected to the structure from below.

Facade – outer PVC kerra front panels

PVC double-glazed windows, flush with the façade, entrance door in the rear and door in the front with patent lock (in the bedrooms and in the bathroom tilt-and-turn windows, round-tilt windows with external sealing flange),

Lower and upper deck based on waterproof formwork board and waterproof OSB board, protected by heat, moisture and sound insulation with polystyrene foam and vapour-proof film

Usable area of the interior floor created from high-quality waterproof vinyl floor tiles

Protection of the surface of the upper terrace by rainproofing, bituminous waterproofing of OSB slats and self-adhesive and thermally welded bitumen sheets.

Exterior walls of utility rooms thermally, moisture-proof and acoustically damped with polystyrene, vapour-proof foil on the inside and vapour-permeable membrane and self-adhesive insulating foam (under the façade) on the outside

Walls filled with Styrodur and clad with plywood and OSB boards
