delta powerboats 54 ips

Description

The Delta 54 IPS stands as the world's first production motor yacht engineered entirely in carbon fiber composite, establishing a revolutionary benchmark for fuel efficiency, performance, and strength-to-weight ratio among premium sports cruisers. Co-founded by naval architect Lars Modin, Delta Powerboats has distilled two decades of Scandinavian design philosophy and advanced marine engineering into the 54, creating a multipurpose vessel capable of excelling across all types of Mediterranean and offshore activities while delivering the refinement and comfort expected of a six-guest luxury yacht.

The distinctive hull design employs an air-supported deep-V geometry with vacuum infusion laminated carbon fiber, vinylester resin, and Divinycell foam core throughout the hull, stringers, bulkheads, deck, and cabin roof. This construction methodology delivers unprecedented strength combined with exceptional light weight—the 54 displaces just 12,800 kilograms dry weight, enabling performance characteristics unattainable in conventional fiberglass or steel construction. The result is a vessel measuring 18.10 metres in overall length with a generous 4.60-metre beam and modest 1.40-metre draft, certified to CE Category B offshore standards while offering fuel consumption of just six litres per nautical mile at 30-knot cruise speeds. Maximum speed reaches 38 knots, positioning the Delta 54 among the fastest and most efficient luxury motor yachts globally, with an impressive 450-nautical-mile range enabling extended Mediterranean transits from Monaco to Corsica, Sardinia, and beyond.
